Office Action Summary

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Spelthann 5,610,234 in view of Fry et al. 4,614,680.
3. Spelthann ('234) has been discussed already in Paper #9. It sets an upper limit for additives at 50% by weight of the total composition, without giving a reason for this limitation. However, Fry et al. teach a composition, which can be a blend of ethylene-(meth)acrylic acid copolymer and ethylene-vinyl acetate-carbon monoxide terpolymer (claim 1) and can additionally contain low density branched polyethylene or high density linear polyethylene (claim 12). The composition further contains between about 40% by weight and about 90% by weight of filler, which filler can be calcium carbonate, hydrated alumina or their mixtures (claims 5 and 6). It would have been obvious to one having ordinary skill in the art, at the time the invention was made, to use the highest amount of filler possible in the composition of Spelthann ('234), as taught by Fry et al., in order to maximize the flame retardance and minimize the cost.
4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter Szekely whose telephone number is (703) 308-2460. The examiner can normally be reached on Tuesday through Friday from 7:00 a.m. to 5:30 p.m.

Art Unit: 1714
